CanMediX CBD Oil is fully decarboxylated.

Different pharmacologically active ingredients, phytocomplex [terpenes], are present in the CanMediX CBD oil, resulting in a amber color and characteristic smell. These terpenes are responsible for specific biological activities.

The healthy properties of *Cannabis Sativa L* are the results of the synergy of all the phytocomplex elements and will bring better results than single components (CBD crystals only).

Terpenic profile of Cannabis Sativa Flower Fraction (0,5%): alpha-Bisabolol, Terpineol, Humulene, Camphene.
